

## Document Management in the Cloud

These days, businesses have better things to do than worry about the details of document management and legally-compliant archiving: they want to focus on their core competences. However, it is still essential to make sure that business-relevant information is available at all times from any location – ideally from the appropriate specialist application, for maximum efficiency when carrying out business processes.

«**Kendox InfoShare SaaS Edition**» for data centre operators lets you offer exactly these options to your customers. Your customers will benefit from secure, trackable data storage and a comprehensive cloud-based DMS/ECM solution. This flexible DMS platform can be easily and quickly integrated into existing specialist applications to ensure that documents are available anywhere, at any time – using your customers' specialist applications, a web browser or a tablet or smartphone.

Everyone wins: your customers get the benefits of a cloud solution and high efficiency when working with business-critical documents, and you – the data centre operator – get to improve your market position by expanding your service portfolio.

## Facts

- Comprehensive DMS/ECM solution
- Designed for use in the cloud
- Revision-safe archiving
- Wide range of access options
- Integrate into specialist applications using an open web API
- Web Services and WCF interface
- Flexible licensing and pricing model
- White labelling

# Kendox InfoShare SaaS Edition

## Customised service level

You know better than anyone what your customers need. We'll provide the software – you choose the individual services to provide your customers with a perfectly-tailored level of service.

## Wide range of access options

«Kendox InfoShare» provides a number of different access options. Users can access documents using the appropriate specialist application, or work directly with archived content anywhere and at any time using the InfoShare HTML5 app, a web browser, a tablet or a smartphone.

## Simple, efficient storage

The archiving process can be quickly and easily integrated into existing business processes and specialist applications using the open web API, automatically archiving documents in a revision-safe format. Users also benefit from seamless access to archived content.

## Legally-compliant archiving

Documents in «Kendox InfoShare» are archived in compliance with legal regulations: changes to documents can be

tracked, and it is also possible to identify what is happening to individual documents at any time. This lets you give your customers confidence that everything really is under control.

## Flexible licensing and pricing model

Flexible pricing and licensing models are available to let you meet the varied demands of your customers. Working together with you, we'll adapt the licence to your customers' needs – rather than the other way around.

## Designed for use in the cloud

«Kendox InfoShare SaaS Edition» is especially designed for use as a cloud solution. This includes support for multiple clients, flexible scaling and storage options, configuration options to guarantee high availability, customer subscription management, usage data measurement which can link to billing systems, and much more besides.

## Universal, open interfaces

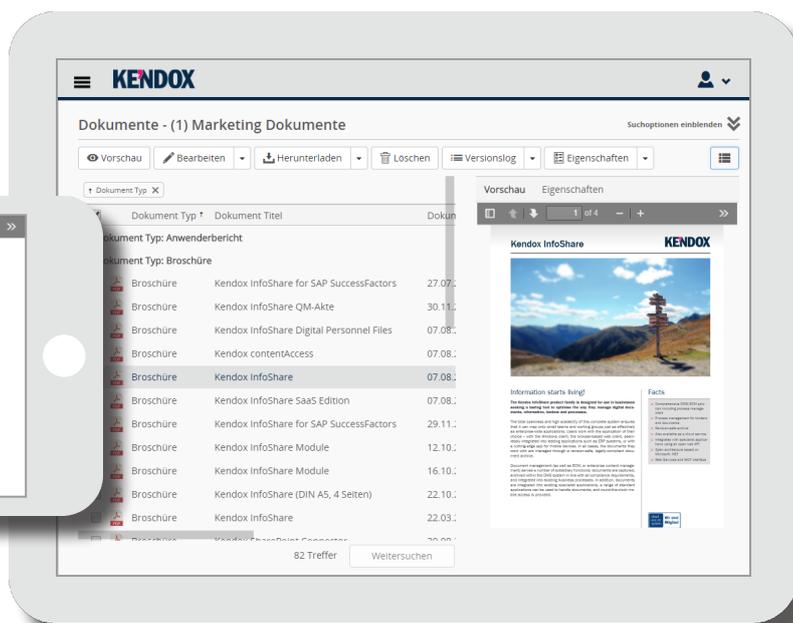

A fully open collection of interfaces, known as the InfoShare Web API, is available for «Kendox InfoShare». These interfaces (Web Services, WCF, REST) let you address almost any «Kendox InfoShare» function to meet your individual requirements. And best of all, there are no additional costs – either to the end customer or to you as the solution operator.

## White labelling

Naturally, you can also customise the look and feel of «Kendox InfoShare» so that it matches the visual style of your own solutions portfolio. Customisation begins with embedding your logo into the service and can go as far as completely merging «Kendox InfoShare» into your existing solutions.
